

Playfair Mining Ltd.

Gold in the Republic of Ireland

March 2018

Cloonacool Prospect Target Area and Drilling

Cloonacool Prospect

Low Frequency Apparent Conductivity (from Tellus)

Gold-Bearing Float

2016 Drilling

Our Goal

- To Discover a Significant High Grade Gold Deposit in a Favourable Jurisdiction
- To us:
 - **Significant** means + 3 million ounces
 - **High Grade** means + 10 gpt
 - **Favourable Jurisdiction** means a First World Country with established Mines and Mining Law

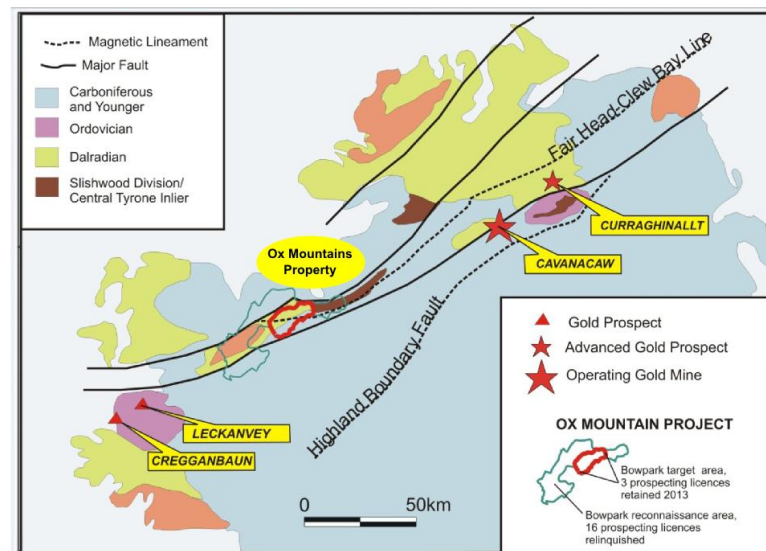

Our Selected Project

- Ox Mountain, Republic of Ireland

Gold In Ireland

- Gold in the northern part of Ireland occurs in Dalradian aged rocks associated with major regional structural features which extend from Scotland through Ireland

Significant High Grade Deposit

- We are targeting a deposit similar to Dalradian Resources Curraghinalt deposit

Mineral Resource Statement, Curraghinalt Gold Project, Northern Ireland SRK Consulting (Canada) Inc. May 5, 2016)			
Resource Category (Cut- off Grade of 5.0 g/t)	Million Tonnes	Grade (g/t Au)	Contained Gold (ounce)
Measured	0.03	26.99	25,000
Indicated	5.58	11.53	2,069,000
Measured + Indicated	5.61	11.61	2,094,000
Inferred	7.13	10.06	2,306,000

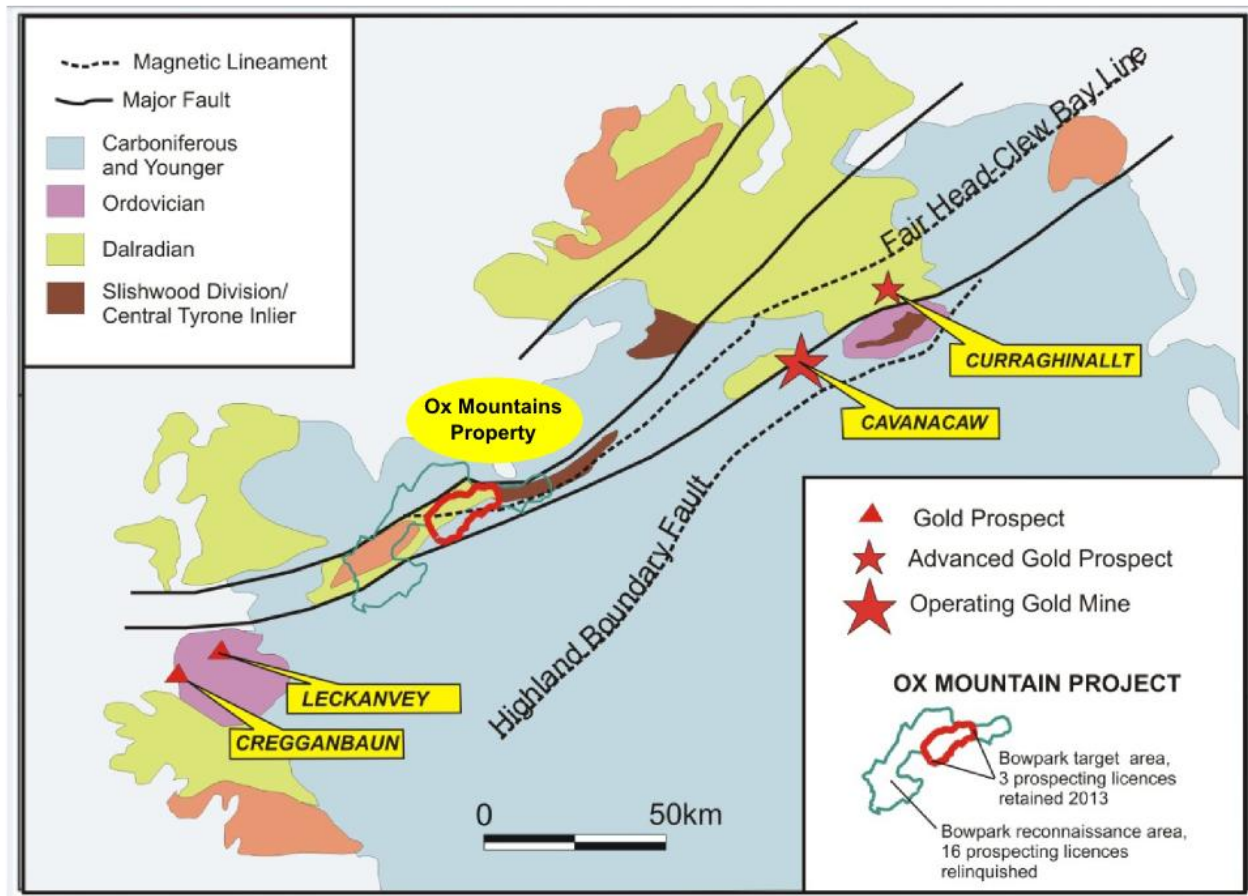

Favourable Jurisdiction

- Ireland was ranked #1 out of 122 jurisdictions in overall mining policy attractiveness by the Fraser Institute in 2013, 2014, 2015 and 2016
- Ireland is the largest zinc producer in Europe and the second largest producer of lead
- Ireland has actively encouraging governments, excellent infrastructure and pragmatic environmental controls

Bowpark

- Bowpark is a private Irish Company owned by geologists Andy **BOW**den and Rick **PARK**er
- Bowpark obtained 16 Prospecting Licences covering 679 square Km of Dalradian rocks near major structures in the Ox Mountains
- Prospecting of the 16 licences found 2 previously unknown areas of angular blocks of “float” containing gold
- The property was then reduced to 3 licences covering 139 square Km

Ox Mountain Project

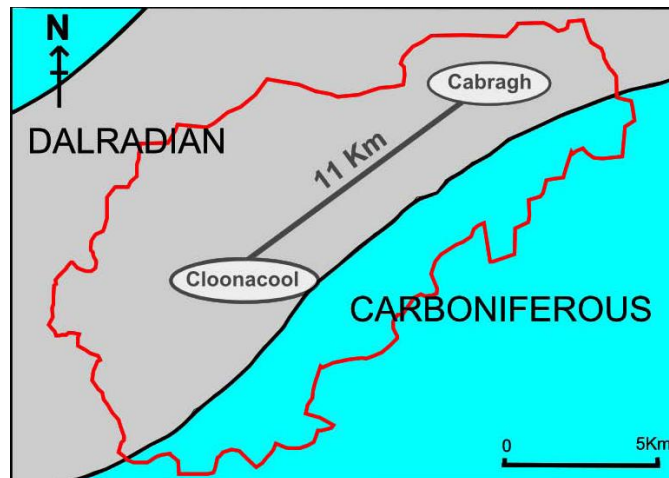

Initial Prospecting

At Cloonacool
Bowpark discovered
angular blocks with
up to 9.80 g/t Au

Before Playfair, Bowpark's
initial prospecting discovered
two previously unknown
areas with angular, locally-
derived blocks containing
significant gold

At Cabragh
Bowpark discovered
angular blocks with
up to 3.43 g/t Au.

Playfair Bowpark Agreement

- Playfair and Bowpark signed an option agreement in November 2013 following Bowpark's initial prospecting whereby Playfair can acquire up to 100 % of Bowpark
- Playfair may, over time in 4 tranches, acquire a 90% interest in Bowpark by expending \$2,280,000 directly on exploration and delivering 1,800,000 shares of Playfair to the current owners of Bowpark with provisions to acquire the remaining 10%

Experienced Discovery Team

Andy Bowden
Discovery of the Galmoy
Zinc-Lead R-Zone

Rick Parker
Discovery of the Cononish
Gold Deposit, Scotland and
the Tatestown Zinc Deposit,
Ireland

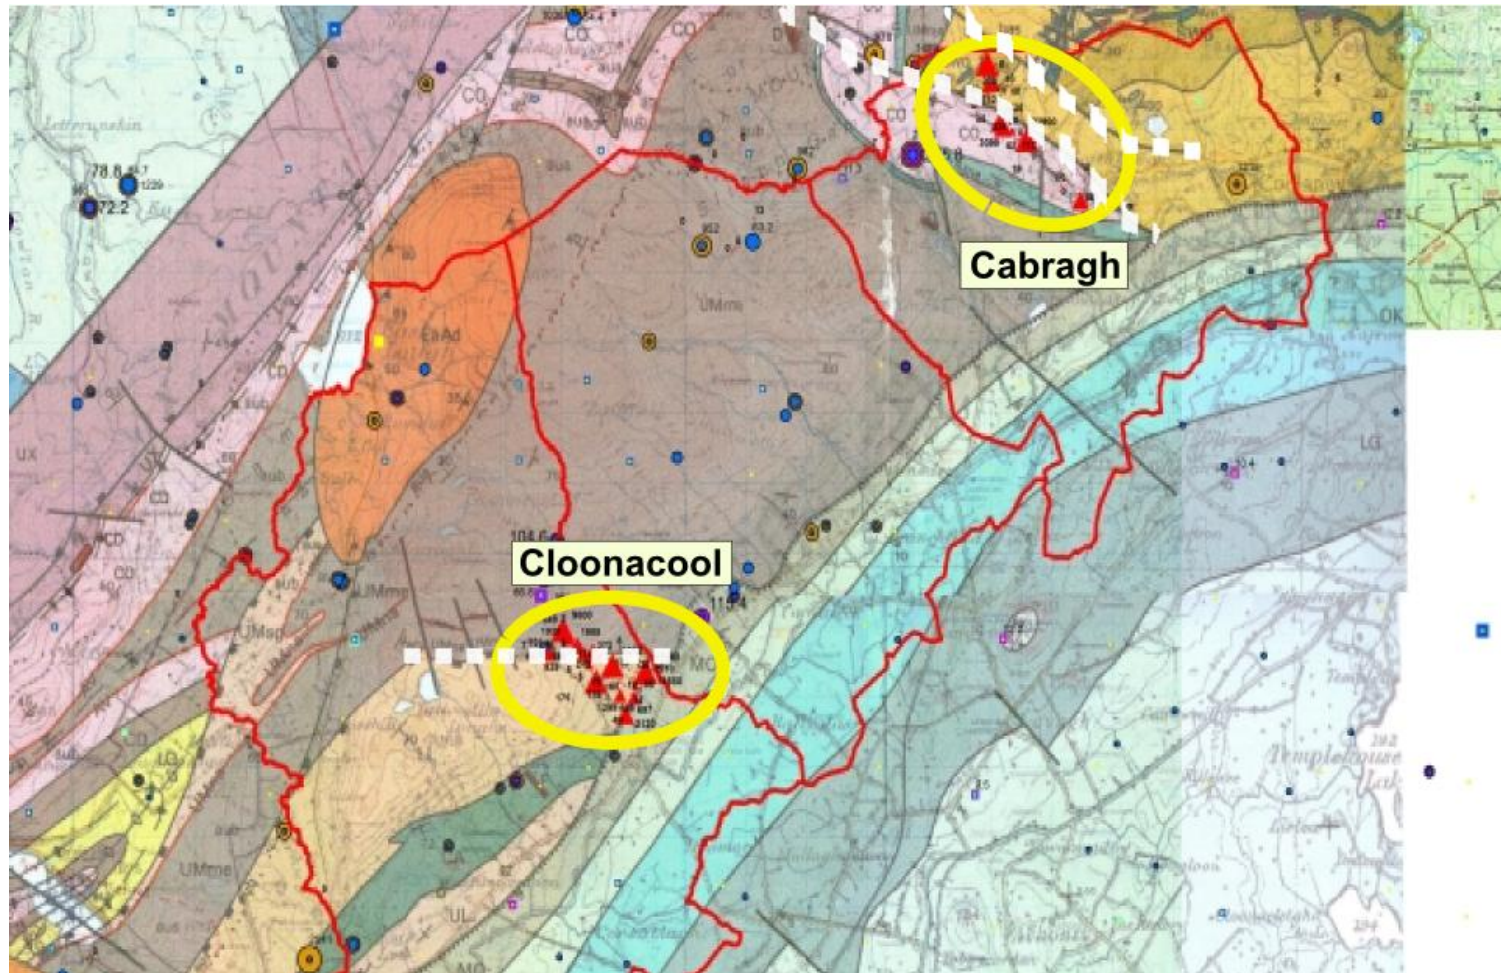

Neil Briggs
Discovery of the Farley Lake
Gold Deposits, Manitoba

Follow-up Prospecting

- Playfair funded Bowpark to carry out follow-up detailed prospecting and soil geochemistry at both Cloonacool and Cabragh
- The area of gold-bearing locally-derived angular blocks (“float) was increased, higher gold values were found
- 3 bedrock gold occurrences were found at Cloonacool
- A significant gold soil anomaly was found at Cabragh
- Geophysical targets established from Tellus survey

Cloonacool and Cabragh

Phase 1 Cloonacool Drilling

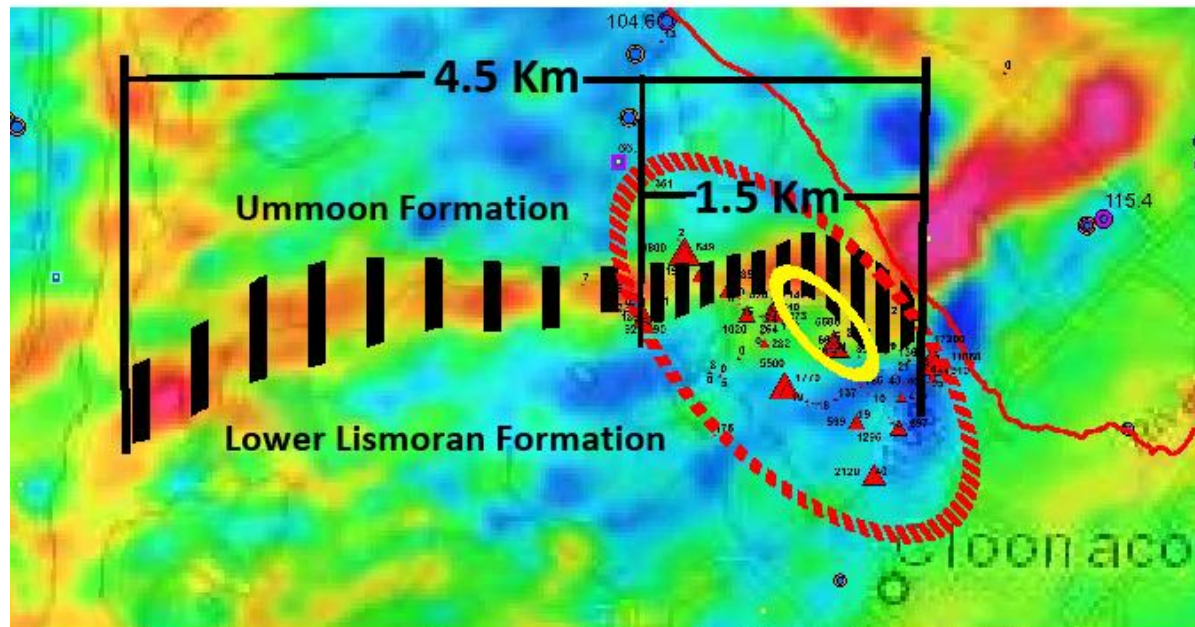

- All 9 holes returned plus 1 gpt gold.
- 200m wide gold-bearing structure discovered.
- Part of structure contains conductive graphite.
- Conductor is 4.5 km long.
- Eastern 1.5 km associated with high-grade gold float is top priority drill target.

Phase 1 Cloonacool Drilling

Hole Number	From (m)	To (m)	Core Length (m)	Gold (gpt)
3382-001	18.00	18.85	0.85	2.920
3382-002	24.00	24.30	0.30	1.580
3382-003	8.00	9.50	1.50	1.641
3382-004	18.50	18.90	0.40	7.320
	30.30	31.00	0.70	1.385
3382-005	65.40	66.00	0.60	1.075
	66.80	67.00	0.20	1.260
3382-006	14.70	14.95	0.25	1.835
	22.15	22.80	0.65	1.220
3382-007	62.20	63.75	1.55	1.085
Including	63.20	63.75	0.55	3.460
	89.35	90.20	0.85	2.140
3382-008	9.90	11.40	1.50	2.837
Including	9.90	10.90	1.00	3.530
	39.85	40.30	0.45	1.865
	50.45	51.80	1.35	1.554
Including	50.45	50.80	0.35	4.690
3382-009	7.80	8.25	0.45	3.260
	14.10	14.45	0.35	2.100
	15.40	16.00	0.60	1.835

Cloonacool Prospect Target Area and Drilling

Cloonacool Prospect

Low Frequency Apparent Conductivity (from Tellus)

Gold-Bearing Float

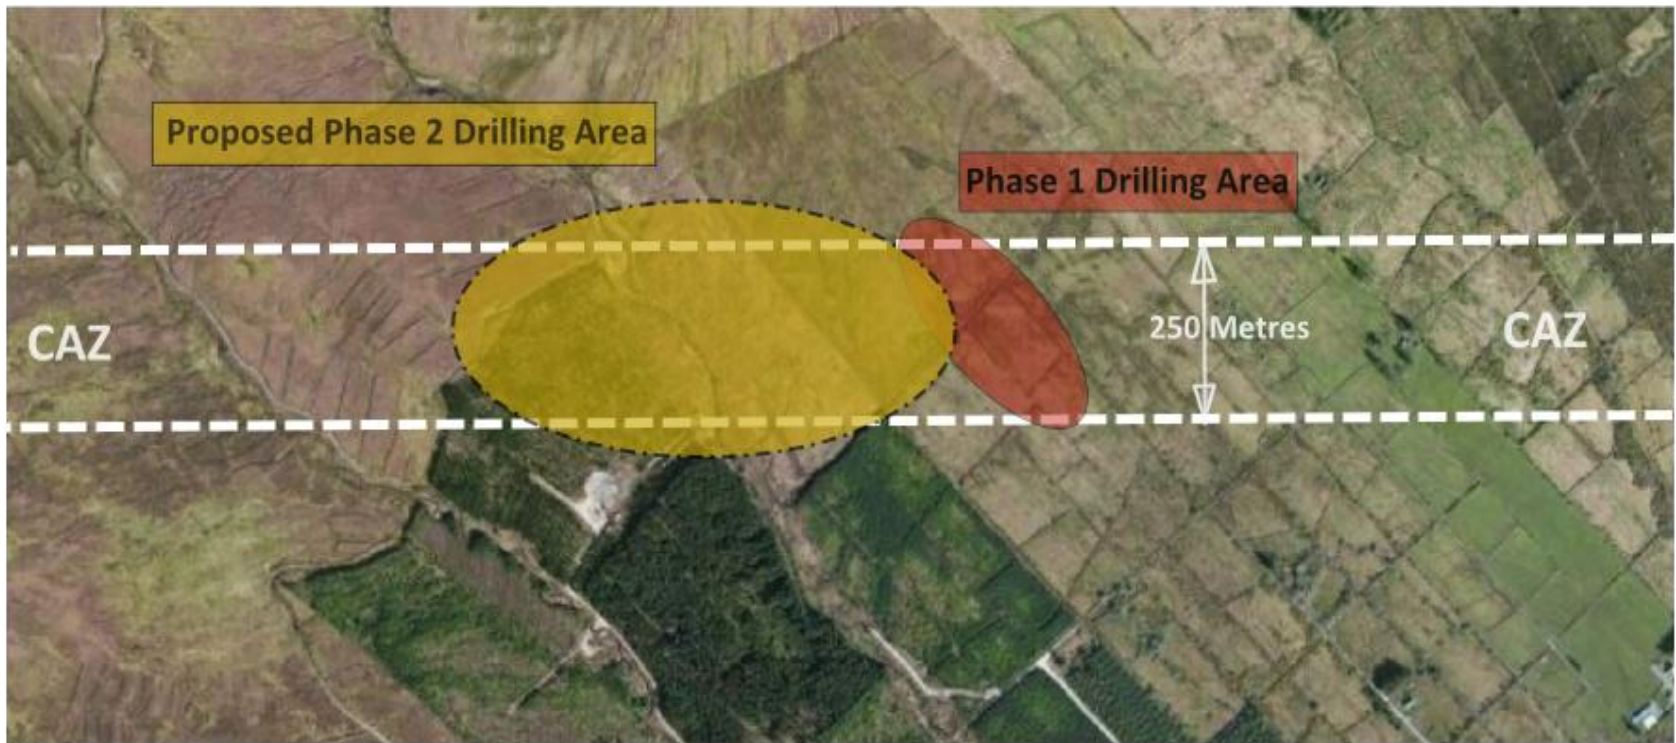

2016 Drilling

Drilling Programs

- Phase 1 completed
 - 1,004 metres in 10 drillholes
 - Major gold-bearing structure discovered at Cloonacool
- Phase 2 planned to start Spring 2018
 - 3000 metres
 - Explore structure at Cabragh
 - Test known gold-bearing structure at Cloonacool on strike and at depth.

Proposed Phase 2 drilling Cloonacool

Cloonacool Drilling

Playfair Mining Ltd.

Share Structure:

Shares Outstanding 51,118,095
No Warrants

Proposed Financing \$500,000

Use Of Proceeds

Exploration Drilling \$400,000
(both Cloonacool and Cabragh)
Contingency \$100,000

Working Capital
On Hand \$200,000

Management:

Donald G. Moore – CEO & Director
D. Neil Briggs – Director
Steven Chan – Director
